Alexandre Bobichon

PHP / Symfony · TypeScript Developer

Email : alexandrebobichon@gmail.com Phone : +33 6 34 06 69 50 LinkedIn : linkedin.com/in/alexandre-bobichon GitLab : gitlab.com/A.Bobichon

Web developer since 2021. I build Symfony applications end to end, from the data model to Docker deployment. Nine months in QA left me with a habit: a feature isn't done until it's tested. Pick your fighter below.

Skills

Back-end : PHP, Symfony, Doctrine, MySQL, Web APIs, Node.js, WordPress

Front-end : TypeScript, Stimulus, JavaScript, HTML / CSS

Quality : PHPUnit, Playwright, Functional testing, API testing (Postman), Acceptance and functional validation, Test cases and plans (Squash TM), Defect tracking

Tooling : Docker, GitLab CI, GitLab, Jira, Agile / Scrum

Methods : V-Model, Project management, CI/CD

Testing practices : Integration testing, Regression testing, Business validation, Bug triage

Tools : SQL, Swagger

Experience

QA Tester

September 2025 – May 2026

Zeiko

- Designed and ran functional tests based on business specifications.
- Wrote and maintained test cases and validation scenarios.
- Ran user acceptance testing and validated feature compliance.
- Identified, triaged and tracked defects through to resolution in Jira.
- API testing with Postman, validating responses (JSON, HTTP status codes, scenarios).
- Kept functional documentation up to date and collaborated with business, product and development teams.
- Took part in Agile/Scrum ceremonies and contributed to continuous improvement of QA processes.

STACK: Jira, Squash TM, Postman, Swagger, Agile/Scrum

Full Stack Developer

January 2023 – May 2024

Groupe IPI

- Designed and developed web APIs and application features with PHP and Symfony.
- Contributed to the design and evolution of a business CRM.
- Corrective and evolutive maintenance of applications based on user needs.
- Set up and ran unit tests with PHPUnit.
- Checked and validated data before production releases.
- Took part in user acceptance testing and defect tracking alongside technical teams.
- Contributed to improving software quality and hardening production releases.

STACK: PHP, Symfony, JavaScript, Node.js, MySQL, GitLab, HTML5, CSS3

Web Developer

September 2021 – July 2022

Kairios

- Developed and maintained several e-commerce websites built on WordPress and PHP.
- Integrated new features and customized user interfaces.
- Took part in functional validation phases before production releases.

STACK: PHP, WordPress, JavaScript, MySQL

Projects

Bobavis

My workshop: a Symfony app that brings my everyday tools together. I had one script per need: a movie list, a YouTube music sorter, ukulele tabs. I merged them into a single application, with a real database, tests and CI.

STACK: PHP 8.2, Symfony 7, Doctrine, MySQL, TypeScript, Stimulus, Webpack Encore, Docker, GitLab CI, PHPUnit, Playwright

Site WordPress

A WordPress showcase site with no page builder: hand-written theme and plugin. At an agency, I maintained WordPress sites where the logic was buried in templates. I wanted to build one like an application: business rules in plain PHP, outside WordPress and tested, the schema in migrations, and a Docker image built by CI.

STACK: PHP 8.2, WordPress, WooCommerce, MySQL, Phinx, Docker, GitLab CI, PHPUnit, PHPStan
